

SIA-B

Self and Dual Powered Overcurrent & Earth Fault Protection Relay **with Standard Current Transformers.**

DNP3.0 SERIAL PROTOCOL MANUAL

1. DNP3.0 PROTOCOL..... 3

1. DNP3.0 PROTOCOL

Communication parameters are:

DNP 3.0 Serial:

- Address and Baudrate
- 8 data bit
- No parity
- 1 stop bit.

1.1. Device Profile Document

<h1>DNP V3.00</h1> <h2>DEVICE PROFILE DOCUMENT</h2> <p>This document must be accompanied by : Implementation Table and Point List.</p>	
<p>Vendor Name:  FANOX Electronic, S.L.</p>	
<p>Device Name: SIA-B</p>	
<p>Highest DNP Level Supported:</p> <p>For Requests 2 For Responses 2</p>	<p>Device Function:</p> <p><input type="checkbox"/> Master <input checked="" type="checkbox"/> Slave</p>
<p>Notable objects, functions, and/or qualifiers supported in addition to the Highest DNP Levels Supported (the complete list is described in the attached table):</p> <p>Static object requests sent with qualifiers 06, will be responded with qualifiers 01.32-bit and Analog Change Events with Time may be requested.</p>	
<p>Maximum Data Link Frame Size (octets):</p> <p>Transmitted <u> 255 </u> Received <u> 255 </u></p>	<p>Maximum Application Fragment Size (octets):</p> <p>Transmitted <u> 217 </u> Received <u> 217 </u></p>

<p>Maximum Data Link Re-tries:</p> <p><input checked="" type="checkbox"/> None</p> <p><input type="checkbox"/> Fixed at _____</p> <p><input type="checkbox"/> Configurable.</p>	<p>Maximum Application Layer Re-tries:</p> <p><input checked="" type="checkbox"/> None</p> <p><input type="checkbox"/> Configurable</p>																																																		
<p>Requires Data Link Layer Confirmation:</p> <p><input checked="" type="checkbox"/> Never</p> <p><input type="checkbox"/> Always</p> <p><input type="checkbox"/> Sometimes. 1.2. Implementation Table

The following implementation table identifies which object groups and variations, function codes and qualifiers the device supports in both requests and responses. The *Requests* columns identify all requests that may be sent by a master, or all requests that must be parsed by an outstation. The *Response* columns identify all responses that must be parsed by a Master, or all responses that may be sent by an outstation.

In the table below, text shaded as 01(start-stop) indicates subset Level 3 functionality (beyond Subset Level 2).

In the table below, text shaded as 08(limited qty) indicates functionality beyond Subset Level 3.

OBJECT			REQUEST (BCD will parse)		RESPONSE (BCD will respond)		
Obj	Var	Description	Func Codes (dec)	Qual Codes (hex)	Func Codes (dec)	Qual Codes (hex)	Notes
1	0	Binary Input - Any variation	1 (read)	06 (no range, or all)			
1	1	Binary Input - Packed Format	1 (read)	06 (no range, or all)	129 (response)	01 (start - stop)	
1	2	Binary Input - With Flags (Default)	1 (read)	06 (no range, or all)	129 (response)	01 (start - stop)	Assigned to Class 0
2	0	Binary Input Event - Any variation	1 (read)	06 (no range, or all)			
2	2	Binary Input Event – with absolute Time (Default)	1 (read)	06 (no range, or all)	129 (response), 130 (unsolicited)	28 (index)	Assigned to Class 1.
10	0	Binary Output – Any variation	1 (read)	06 (no range, or all)			
10	2	Binary Output – Output status with flags (Default)	1 (read)	06 (no range, or all)	129 (response)	01 (start - stop)	Assigned to Class 0.
11	0	Binary Output Event – Any Variation	1 (read)	06 (no range, or all)			
11	2	Binary Output Event – Status with Time (Default)	1 (read)	06 (no range, or all)	129 (response), 130 (unsolicited)	28 (index)	Assigned to Class 1
12	1	Binary Command – Control Relay Output Block (CROB)	3 (Select) 4 (Operate) 5 (Direct Operate)	28 (index)			
20	0	Counter – Any Variation	1 (read)	06 (no range, or all)			
20	1	Counter – 32 Bit with flag (Default)	1 (read)	06 (no range, or all)	129 (response)	01 (start - stop)	Assigned to Class 0

OBJECT			REQUEST (BCD will parse)		RESPONSE (BCD will respond)		
Obj	Var	Description	Func Codes (dec)	Qual Codes (hex)	Func Codes (dec)	Qual Codes (hex)	Notes
21	0	Frozen Counter – Any Variation	1 (read)	06 (no range, or all)			
21	1	Frozen Counter – 32 Bit with flag (Default)	1 (read)	06 (no range, or all)	129 (response)	01 (start - stop)	
22	0	Counter Event – Any Variation	1 (read)	06 (no range, or all)			Assigned to Class 1
22	1	Counter Event – 32 Bit with flag (Default)	1 (read)	06 (no range, or all)	129 (response) 130 (unsolicited)	28 (index)	
30	0	Analog Input – Any Variation	1 (read)	06 (no range, or all)			
30	1	Analog Input – 32-Bit with flag (Default)	1 (read)	06 (no range, or all)	129 (response)	00 (start - stop)	Assigned to Class 0
32	0	Analog Input Event – Any variation	1 (read)	06 (no range, or all)			
32	1	Analog Input Event – 32-Bit without Time (Default)	1 (read)	06 (no range, or all)	129 (response) 130 (unsolicited)	28 (index)	Assigned to Class 2
50	1	Time and Data – Absolute time	2 (write) 3 (read)	07 (limited qty = 1)			
60	1	Class Objects – Class 0 Data	1 (read)	06 (no range, or all)			
60	2	Class Objects – Class 1 Data	1 (read)	06 (no range, or all)			
60	3	Class Objects – Class 2 Data	1 (read)	06 (no range, or all)			

1.3. Point List

BINARY INPUT (OBJECT 1) -> Assigned to Class 0. BINARY INPUT CHANGE (OBJECT 2) -> Assigned to Class 1.

BINARY INPUT (OBJECT 1) -> Assigned to Class 0. BINARY INPUT CHANGE (OBJECT 2) -> Assigned to Class 1.		
Index	Criteria	Point
63	Local Communication	Open Breaker
64		Close Breaker
65		Reset Thermal Image
66	Remote Communication	Open Breaker
67		Close Breaker
68		Reset Thermal Image

BINARY OUTPUT (OBJECT 10) -> Assigned to Class 0. BINARY OUTPUT CHANGE (OBJECT 11) -> Assigned to Class 1.		
Index	Description	
0	Output 1	
1	Output 2	
2	Output 3	
3	Trip Output	

ANALOG INPUT (OBJECT 30) -> Assigned to Class 0. ANALOG INPUT CHANGE (OBJECT 32) -> Assigned to Class 2.		
Index	Description	
0	Phase A current IA	
1	Phase B current IB	
2	Phase C current IC	
3	Neutral current IN	
4	Negative sequence current I-2	
5	Phase A second harmonic current IA-2H	
6	Phase B second harmonic current IB-2H	
7	Phase C second harmonic current IC-2H	
8	Maximum phase current IMAX	
9	Thermal Image TI	

Measurements are in primary values with a scalefactor of 100.

i.e. A current measurement of 2A in secondary with a RT=20 will be shown as $2 \cdot 20 \cdot 100 = 4000$

The DeadBand of the current measurements is adjustable by General settings and it is X% of the Nominal Current ($X\% \cdot I_n$).

i.e. If the $I_n = 1A$ and the deadband is adjusted to 10%, then

$10\% \cdot 1A = 0.1$ (100mA), the measurement will be reported by event when it changes more than 100 mA and if the $I_n = 5A$, the deadband will be $10\% \cdot 5A = 0.5$ (500mA), the measurement will be reported by event when it changes more than 500 mA.

COUNTER (OBJECT 20) -> Assigned to Class 0.
COUNTER EVENT (OBJECT 22) -> Assigned to Class 1.
FROZEN COUNTER (OBJECT21)

Index	Description	
0	Openings Number	
1	Accumulated Amperes	

CONTROL RELAY OUTPUT BLOCK (OBJECT 12)

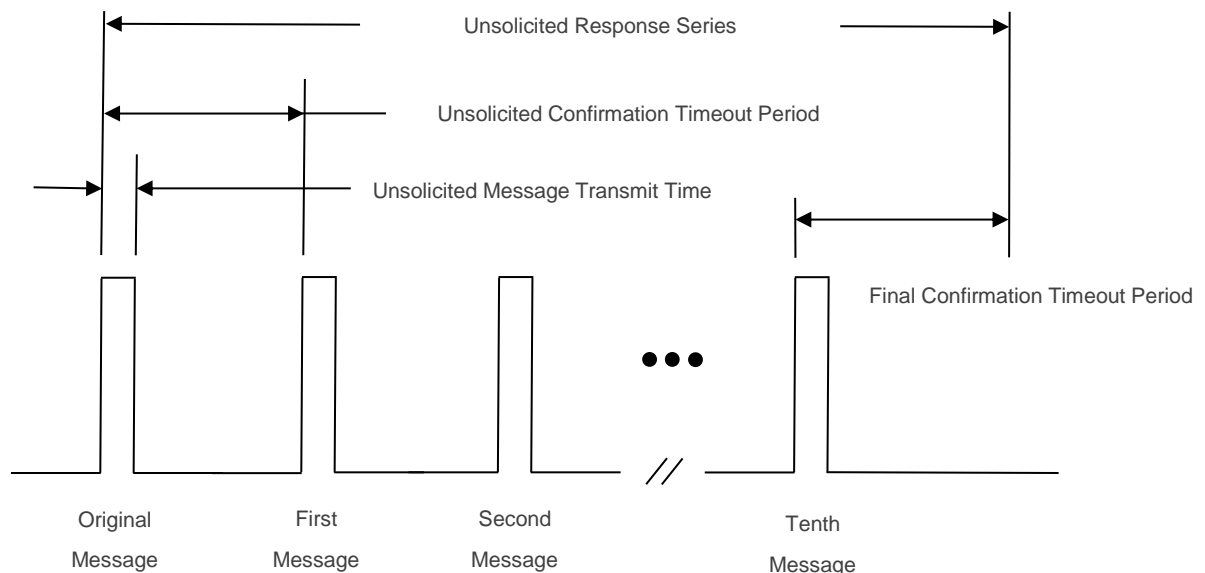

Index	Description	
0	Opening Command	Point Number = 0 (ON)
1	Closing Command	Point Number = 0 (OFF)
5	Thermal Image Command	Point Number = 3 (ON)

1.4. Unsolicited Responses

Unsolicited responses are messages spontaneously sent from SIA-B without a specific request from a master station when “something of significance” occurs.

The SIA-B relay supports the functions code 29 (Enable Unsolicited Responses) and 30 (Disable Unsolicited Responses). The SIA-B default configuration has the unsolicited responses disable, if the user wants to start using these messages must perform the function code 29. After the function code 29 is sent, the user must open the communication port. This communication port is set to 20000 as default.

The unsolicited responses behavior follows the procedure described in the standard and it is illustrated in the following diagram:

After the original message is sent, the outstation waits two seconds for the master confirmation, this time is shown as the *Unsolicited Confirmation Timeout Period* in the figure. If the outstation does not receive any confirmation from the master, then the outstation replies the original message in a series of ten messages.

All the Binary Inputs, Outputs and Counter changes described previously in this document are available to be sent in an Unsolicited Response message.

The measurements sent via Analog Input objects are available to be sent in an Unsolicited response considering the deadband variation previously explained in this document regarding the specific data object (Current).

Note: Only the first eight measurements will be considered as data in unsolicited responses using the Analog Input Change object.
